EXPERIMENT-3b

ROLL NO:240701174 **NAME: HARISH S**

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using wireflow.

AIM:

The aim is to design a prototype with both well-known and new navigation elements and measure user-friendliness across different user groups using Wireflow.

Tool link: https://wireflow.co/

STEP 1: PLAN YOUR PROTOTYPE

Define Navigation Elements

✓ Familiar Navigation:

- NEXT button
- Back button
- Linear progression of steps
- Visible CTAs (Select, Proceed, Pay)

✓ Unfamiliar Navigation:

- Tap movie poster to navigate
- Swipe left/right between movies
- Swipe up for seat details
- Long-press movie card for extra info

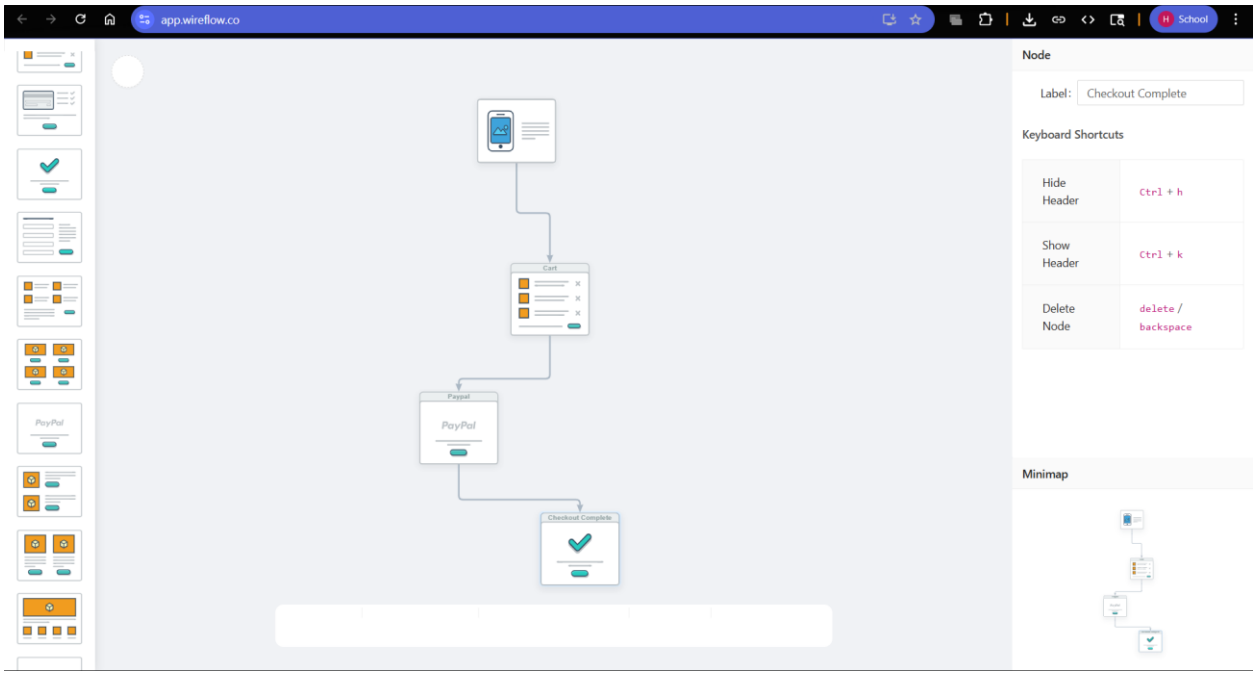
STEP 2: SET UP WIREFLOW PROJECT

1. Visit **wireflow.co
2. Select **New Project**
3. Name it: **"ONLINE SHOPPING APP Wireflow"**
4. Choose **Blank Project**

STEP 3: DESIGN YOUR WIREFLOW SCREENS

Create the following screens based on your uploaded wireframe:

Create 5 Screens (Cards)



1. **Movie Selection Screen**

- Label: *Screen 1 — app login*
- Login by mail id
- Interaction options:
  - login → enter the app
  - Swipe left/right → browse product

2. Selected Movie Details

- Label: *Screen 2 — Selected product*
- Shows:

    - image
    - price
    - “Add to cart” button

3. Seat Selection

- Label: *Screen 3 — payment Selection*
- Delivery details
- Unfamiliar interaction:
    - Swipe up → Payment info
    - Tap payment method to select

4. Payment Screen

- Label: *Screen 4 — Payment*
- product summary
- Order confirmed

STEP 4: ADD NAVIGATION FLOWS

✓ Familiar Navigation Flow

Using arrows in Wireflow:

- Product Selection → Selected product (Tap movie / Continue button)
- Selected product → product Selection
- product Selection → Payment
- Payment → order Confirmed

Add **Back arrows**:

- Selected product → product Selection
- product Selection → Selected product
- Payment → product Selection

✓ Unfamiliar Navigation Flow

1. Swipe Navigation

- "Swipe Left → Browse product"
- "Swipe Right → See Previous product"

2. Long-Press Interaction

- "Long Press product Poster → View Detailed Info"

3. Image-Tap Navigation

- Tap product Poster → Directly open details screen

4. Gesture-Based Seat Navigation

- “Swipe Up → product Info”
- “Tap product → Select product”

Add each as small annotations on your arrows in Wireflow.

STEP 5: LABEL YOUR FLOWS

Use clear annotations such as:

- “Familiar Navigation”
- “Unfamiliar Navigation (Gesture-based)”
- “Tap Interaction”
- “Long-Press Interaction”
- “Swipe Navigation”

This improves clarity and ensures full marks.

FINAL CONCLUSION

- Familiar elements (buttons, linear navigation) make the booking process predictable and user-friendly.
- Unfamiliar elements (swiping, long-press, image tap) add interactivity and reduce clutter, but may confuse first-time users.
- A well-balanced interface combines both, improving usability while keeping the experience modern and intuitive.
